About

Second-year BSc Cybersecurity student at Howest University of Applied Sciences in Belgium, with a first year completed at 60 out of 60 credits at the first attempt. I learn security by building and breaking: I built PenTrix-VulnLab, an open source vulnerable web application with 201 challenges across 29 modules, and I hunt vulnerabilities on YesWeHack, where I earned quarterly recognition for responsible disclosure. In the Cyber Security Challenge Belgium 2026 I ranked first in Web in the Junior Division, third overall among juniors, and 26th out of 806 participants nationally. Available for offensive security internships and junior roles: Feb to Apr 2027 and Jul to Sep 2027, on site in Kortrijk, Ghent, Brussels, or Diegem, or remote from Belgium.

Work experience

Bug Bounty Hunter - YesWeHack, remote, part time

Feb 2026 to Present

- Responsible disclosure on live programmes, by category only: authentication, authorization, injection, business logic, information disclosure, cryptography, file upload, and rate limiting.
- 35 reports submitted to date, 3 rewarded, by my own count, with quarterly recognition for performance.

Junior DevSecOps and AI Security Engineer, Damno Solutions

Nov 2025 to Jun 2026, remote, part time, 20 hours per week

- Delivered 13 vulnerabilities against a brief of 3 or more.
- Fixed 2 critical vulnerabilities: a remote code execution flaw and a SQL injection flaw.
- Built GitLab CI/CD security pipelines, reviewed the CBAM codebase, and wrote more than 1,800 lines of security documentation.

Founder and Offensive Security Researcher - The PenTrix

Self founded

- Built for the next generation of security researchers: PenTrix-VulnLab, 30 Days of Practical Pentesting, the PenTrix platform, and Security-Books.
- Every project ships with a write up that explains the method, not just the result.

Education

BSc Cybersecurity - Howest University of Applied Sciences, Bruges
Sep 2025 to Jun 2028, 180 ECTS
- First year: 60 out of 60 credits, first attempt, no retakes.

ICS, Intermediate in Computer Science - Dawn Science College, Barnala
2022 to 2024, Grade A+

Matriculation, Computer Science - Govt. High School for Boys, Hazara Mughlan
2020 to 2022

Projects

PenTrix-VulnLab - Deliberately vulnerable web app for learning web penetration testing: 201 challenges across 29 modules, 3 kill chain scenarios, and 3 career paths with verifiable certificates.
PowerShell Academy - Free PowerShell learning with no account: 18 chapters, 61 lessons, 102 commands, and 48 glossary terms across 6 stages.
BugHunt Arsenal - Free browser based web pentesting and security research platform: 800+ payloads across 21 categories, 150+ tools, 60+ CTF tools, 50+ free labs, 14+ modules.
Ai-Terminal-X - AI powered Linux terminal assistant: plain language to executable commands through Google Gemini, with safe execution checks.
APK Security Pipeline - Pure Python, v2.1.0: one command security checks an Android app, with static rules, Frida dynamic traces, scoring, and HTML and JSON reports. 64 tests passing.
AgentArsenal - Unified skills repository: 353 skills across 29 domains, per skill versioning, automated testing, quality scoring, and a one command installer.

Certifications

Certified Network Security Practitioner (CNSP), with Merit - The SecOps Group
Certified Ethical Hacking v12 (CEH), course certificate - LearnKartS
CompTIA PenTest+ Specialization, course - Packt
AI Agents and Agentic AI - Vanderbilt University
Application Security for Developers and DevOps Professionals - IBM
Web Application Security Testing with OWASP ZAP - Coursera
Linux 101 - TCM Security
Web App Security Testing with Google Hacking - CodeRed
Google AI Essentials - Google
Advanced Python Scripting - Issuer unknown
In progress, not held yet: eJPT and eWPT through INE Security. Courses studied, exams coming.

Honours and awards

- Cyber Security Challenge Belgium 2026: 1st in Web (Junior Division), 3rd overall (Junior Division), 26th out of 806 participants nationally, 26 flags solved. Represented Howest.
- YesWeHack quarterly recognition for bug bounty performance.
